

# Vertical Turbine Snowmaking Pumps Models VTP and VPC

## **The Most Rugged and Dependable Pumps in the Snowmaking Industry**

*Flowserve VTP and VPC vertical pumps are widely used in snowmaking systems at fine ski resorts and athletic venues the world over. With unmatched dependability and a proven record of experience in this industry, Flowserve vertical turbine pumps are the preferred choice in a business where performance on-demand is critical to success.*

For 25 years the world's largest manufacturer of pre-packaged pump stations for ski area snowmaking has been using Flowserve vertical turbine can (VPC) and wet pit (VTP) pumps for virtually all of their snowmaking installations. By utilizing these pumps they have been able to design a flow control station that provides constant discharge pressure, without fluctuation, for optimum snowmaking results.

*Flowserve manufactures one of the world's most comprehensive lines of mixed flow, diffuser type vertical turbine pumps. Their broad hydraulic coverage is well complemented by their application versatility.*

**VTP Vertical Turbine, Wet-Pit Pump**

The Flowserve VTP is a single case, wet-pit model designed for heavy-duty, continuous service in sumps, lakes, rivers and wells. Available with ASME Class 150, 300 and 600 raised face flanges, the VTP is well suited for high-pressure snowmaking systems.

**VTP Operating Parameters**

- Flows to 13 600 m<sup>3</sup>/h (60 000 gpm)
- Heads to 700 m (2300 ft)
- Pressures to 100 bar (1450 psi)
- Temperatures from -45°C (-50°F) to 200°C (400°F)

**VTP**

**VPC**

**VPC Vertical Turbine, Canned Pump**

The Flowserve VPC is a double casing, diffuser type vertical turbine pump. Available in single or multistage construction the VPC incorporates the proven hydraulics of the VTP pump into a double casing configuration. It is designed for continuous duty applications with limited NPSH.

**VPC Operating Parameters**

- Flows to 13 600 m<sup>3</sup>/h (60 000 gpm)
- Heads to 1070 m (3500 ft)
- Pressures to 100 bar (1450 psi)
- Temperatures from -45°C (-50°F) to 230°C (450°F)

**Available Options**

VTP and VPC vertical turbine pumps are available in a wide variety of configurations, constructions and materials to suit site and application requirements.

- Fabricated or cast iron discharge heads
- ASME Class 150, 300 or 600 flanges
- Precision-balanced, adjustable spacer coupling
- Extra high-pressure stuffing box
- Mechanical seal
- Wear rings for bowls and impellers
- Double keyed impellers (shown)
- Thrust balanced impellers
- Low NPSHR impellers
- High strength bowls
- 70 bar (1000 psi); class 45 cast iron
- 100 bar (1450 psi); ductile iron
- Material upgrades (bowls, impellers, shafting)

**D800 Single-Stage, End-Suction Pump**

For lower pressure snowmaking packages leading manufacturers turn to the Flowserve D800 single-stage, end-suction pump. Available in frame-mounted and close-coupled configurations, the D800 offers a large flow and head range and incorporates proven features that reduce and facilitate maintenance.

**D800 Operating Parameters**

- Flows to 455 m<sup>3</sup>/h (2000 gpm)
- Heads to 150 m (500 ft)
- Pressures to 15 bar (220 psi)
- Temperatures from -45°C (-50°F) to 120°C (250°F)
